

Transform home-based care with direct insight into patient progress

For Patients

- Right care at the right time
- Improved well-being
- Increased satisfaction

For Caregivers

- Fully connected to care team
- Increased satisfaction
- Reduced burnout

For Clinicians

- Focused on right patients
- Better informed care
- Reduced burnout

How it Works

Connects patients, their loved ones, and the entire care team in between visits

Full Patient Insight

- Physical and emotional symptoms
- Well-being progression
- Vitals signs and physical activity
- Treatment efficacy and side effects
- Medication adherence
- Care plan adherence and barriers
- Social Determinants of Health
- Daily living support needs

Informed and Efficient Care

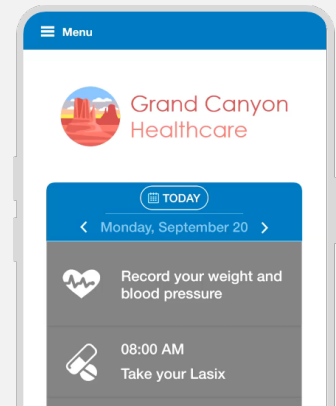

- Needs-based patient prioritization
- Clear view of patient progression, adherence and issue root cause
- Treatment efficacy and tuning
- Population-level insights

Helen is 67 and lives alone
Her daughter Sara is her primary caregiver
She has a history of CHF, asthma, and anxiety
She arrived at the ER for shortness of breath twice in one month
Helen was enrolled in a home health program to help manage her CHF

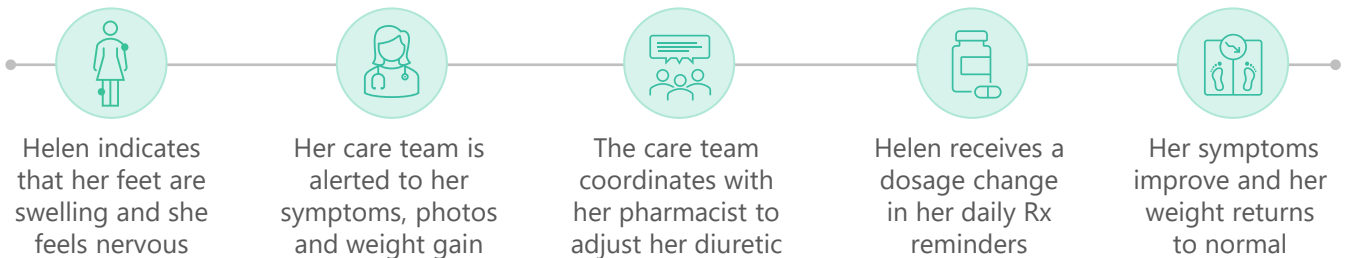

Helen and her daughter Sara use TapCloud to better manage her care

- Her physical and emotional symptoms are monitored
- Her medication adherence is managed proactively
- She is provided personalized education and resources
- Her biometric devices are connected and capturing data
- Her caregiver daughter is fully connected for added support
